## Capture & Creation

Powered by  
**ABBYY**

- Convert hard copies into the electronic format you like
- 21 output formats available to create your own digital library at the touch of a single button
- Send converted documents directly to network drives, via FTP or by secure E-mail
- Take advantage of a single e-BRIDGE Re-Rite licence for an unlimited number of users and devices

# Your gateway to a modern document imaging workflow

Toshiba e-BRIDGE Re-Rite is a complete, easy to use and affordable office automation platform, which automatically converts scanned paper documents into editable and searchable files via an e-STUDIO multifunctional system (MFP).

## One touch - complete workflow

You can choose one of 21 electronic file formats including Word, Excel, PDF and HTML and e-BRIDGE Re-Rite will perform automatic document scanning, optical character recognition,

format conversion and document routing to preselected destinations.

And what's more - it is so easy to use that everybody in the office can benefit from it. The MFP user interface allows an intuitive approach with e-BRIDGE Re-Rite and will improve the efficiency of workflows in your office.

## Full flexibility

Select Scan to Network Drive, Scan to FTP or choose Scan to E-mail and receive the document in a file format of your choice. Even received fax documents can be converted automatically.

With e-BRIDGE Re-Rite you never have to re-type or re-format documents, which are only available as hard copy. And if your MFP features colour scan, this will be fully supported by e-BRIDGE Re-Rite. The digitalised files will be delivered to a network drive or directly to your mailbox.

## Batch separation

The batch separation function lets you handle large volumes of documents which need to be scanned. Multiple files can be fed through the scanner at once and e-BRIDGE Re-Rite will create separate files for you based either on bar-coded sheets or on a set number of pages.

## Meta Scan

The optional Meta Scan enabler takes e-BRIDGE Re-Rite a step further: It allows you to add a set of key words by which scanned documents can be classified and identified. Rather than routing scanned files to a single folder, Meta Scan uses your keywords to define a content searchable folder structure on your network, making it even easier to search for any scanned document. This lets you create your own digital library in which all your documents are neatly archived and easy to access.

### INPUT OPTIONS

- E-mail
- Image Auto Rotation
- Batch split by barcode separator
- Monochrome/Colour
- MFP scan
- MFP image files
- Incoming Fax
- Hot folders

### OUTPUT OPTIONS

- File naming with name, date, time, user metadata
- To user/subfolder
- Network shares
- FTP
- E-mail

## e-BRIDGE Re-Rite specifications

### File formats supported include:

- Word (DOC/DOCX)
- Excel (XLS/XLSX)
- PowerPoint (PPTX)
- Rich Text Format (RTF)
- PDF (1.3-1.7, A/A1a/A1b)  
(PDF Text (text only), PDF Image Substitution Text, PDF Image on Text (text under image), Secure PDF)
- eBook (ePUB, FB2)
- HTML 4.0
- Tabular Data Format (Unicode and ANSI encoding)
- Unformatted Text (Unicode and ANSI encoding)
- Formatted Text (Unicode and ANSI encoding)
- Comma Separated Value (CSV)  
(Unicode and ANSI encoding)

### Processing options:

- Despeckle
- Deskew
- Remove colour
- Remove distortion
- Low resolution compensation
- Optimised for editing
- Optimised for layouting

### OCR languages supported:

Albanian, Bulgarian, Czech, Danish, Dutch, English, Estonian, Finnish, French, German, Greek, Hungarian, Italian, Latvian, Lithuanian, Macedonian, Maltese, Norwegian, Polish, Portuguese, Romanian, Russian, Serbian, Slovak, Slovenian, Spanish, Swedish, Turkish, Ukrainian

### Advanced security

Reliability and security are important factors in any office environment. Therefore, e-BRIDGE Re-Rite supports the PDF/A format. This ISO-standardised file format ensures that a PDF file created today can be opened and reproduced exactly in the same way in years to come. But storing files in your digital library for future use also requires a high security level.

The advanced PDF and E-mail security standards offered by e-BRIDGE Re-Rite allow you to permit or deny the right to open, print, copy or edit documents. Furthermore, the application supports authentication with SMTP servers, so you can restrict internal security leaks by specifying log-in details when delivering an e-mail.

### Only one license

e-BRIDGE Re-Rite is a server based application which makes it available to an unlimited number of users with just one license. There is no need to install software on a client PC, making it easy to set up and maintain. It also means that e-BRIDGE Re-Rite is client platform independent and supports all operating systems. The application can be installed on any e-BRIDGE driven Toshiba MFP.

## System requirements

### Processor:

Required: Pentium® IV 2.66 GHz  
Recommended: Pentium Dual CPU 1.60 GHz

### RAM:

Required: 512 MB  
Recommended: 1 GB

### Free Disk Space required:

200 MB + additional space for data stored on the same system

### Screen and resolutions:

15" or 17" display at 1024 x 768 pixels

### Web browser:

Internet Explorer, Mozilla Firefox, Google Chrome

### Network Card:

10/100Base T/X for MFP access

### Supported Operating Systems:

Windows 7/Vista/XP/Server2003 (32/64bit)/  
Server2008
